

Vincent Landeau

Full Stack Engineer

Full-stack Developer with over 4 years of professional experience building and maintaining web applications, e-commerce platforms and mobile applications. Experienced in backend API development, modern frontend frameworks, database integration and cross-platform application development. Strong background in JavaScript/TypeScript ecosystems, complemented by Symfony and CMS development.
Recently worked as a freelance developer for Systemity, a Swedish software company, contributing to two digital products involving backend API development, mobile and web integrations, authentication and infrastructure.
Comfortable working independently, collaborating remotely and adapting to different technical environments.

Professional Experience

Freelance Full Stack Engineer
France | December 2025 - November 2026

Fully remote work across France, Sweden and South Korea

Contributed to the development of two software products for an international company.

SYSTEMITY
Systemity AB, Ystad, Sweden | June 2026 - November 2026

Digital workspace designed to help racing teams manage assets, track equipment lifecycles and organize work orders

Developed backend services and web application features for a workspace designed to help racing teams manage assets, equipment lifecycles and work orders. Worked on API architecture, authentication, database integration, file storage and interactive mapping.

BIKEFLEET
Systemity AB, Ystad, Sweden | December 2025 - June 2026

Personal vehicle maintenance assistant designed to track and manage maintenance activities.

Contributed to a vehicle maintenance management application, developing backend services and integrating application features across web and mobile platforms. Worked with authentication, database services and cross-platform application integration.

Full Stack Engineer
16h33 Agency, Champniers, France | February 2024 - December 2025

Permanent employment contract

Developed and maintained websites, e-commerce platforms and custom web applications for agency clients. Specialised in Symfony application development and PrestaShop module development, alongside WordPress, Vue.js and Nuxt.js integrations. Also handled website migrations, maintenance and technical improvements across existing projects.
